Retrieving tenants and subscriptions for the selection...

[Tenant and subscription selection]

No      Subscription name      Subscription ID      Tenant
-----
[1]      2TDSFG-2026-RM561432-ENZO-OKUIZUMI  01bd2f0c-367c-4533-bf77-c3454ada4a18  Grupo Alun
[2]      2tdspg-rm564836-MiltonMarcelino      39ffaa05-1ee0-46d8-bb89-cdabdbba4288  Grupo Alun
[3] *    2tdspg-rm566422-LucasBarrosGouveia  213b06ed-e7f7-4f7b-a22d-f0f15daa85ff  Grupo Alun

The default is marked with an *; the default tenant is 'Grupo Alun' and subscription is '2tdspg-rm566422-LucasBarrosGouveia' (213b06ed-e7f7-4f7b-a22d-f0f15daa85ff).

Select a subscription and tenant (Type a number or Enter for no changes): 1

Tenant: Grupo Alun
Subscription: 2TDSFG-2026-RM561432-ENZO-OKUIZUMI (01bd2f0c-367c-4533-bf77-c3454ada4a18)

[Announcements]
With the new Azure CLI login experience, you can select the subscription you want to use more easily. Learn more about it and its configuration at https://go.microsoft.com/fwlink/?linkid=2271236

If you encounter any problem, please open an issue at https://aka.ms/azclibug

[Warning] The login output has been updated. Please be aware that it no longer displays the full list of available subscriptions by default.

Acessando Swagger da Aplicação Dot Net via IP da VM

The screenshot shows a web browser window with the Swagger UI for the TerraNova API v1. The browser's address bar shows the URL `20.116.17.249:8080/index.html`. The Swagger UI header includes the Swagger logo, the text "Select a definition", and a dropdown menu showing "TerraNova API v1".

The main content area displays the API title "TerraNova API" with a "v1" tag and a "OAS 3.0" badge. Below the title, it says "API REST para monitoramento agrícola com dados SatVeg e NASA POWER." and provides a link to "Contact Equipe TerraNova".

The API is organized into two sections:

- Produtor** (Gerenciamento de produtores rurais):
 - GET** `/api/Produtor`: Lista todos os produtores.
 - POST** `/api/Produtor`: Cadastra um novo produtor.
 - GET** `/api/Produtor/{id}`: Obtém um produtor pelo ID.
 - PUT** `/api/Produtor/{id}`: Atualiza um produtor pelo ID.
 - DELETE** `/api/Produtor/{id}`: Remove um produtor pelo ID.
 - GET** `/api/Produtor/by-email`: Obtém um produtor pelo e-mail.
- Telefone** (Gerenciamento de contatos telefônicos):
 - GET** `/api/Telefone`: Lista todos os registros de telefone cadastrados.
